SUMMARY

Software engineer with over twelve years of professional experience, most of it as a consultant working close to clients, including Volvo Construction Equipment and Stena Recycling. I build and run complete services: React and TypeScript on the front end, Node.js, GraphQL and REST APIs on the back end, running on Azure and AWS and packaged in Docker. I also have long practical experience of Linux, self-hosted infrastructure, networking, reverse proxies and certificate management from running my own server.

What I work on most right now is how AI is used responsibly in practice, and I want to work on getting AI systems into reliable production, and ideally closer to the models themselves and the work that makes them trustworthy.

EMPLOYMENT

2022 TO PRESENT
GOTHENBURG

Fullstack Developer, Humblebee

Consultant working on fullstack development in TypeScript, React and Node.js. I work close to the client, from proposing solutions and advising on technical direction through to implementation. Focus on establishing sound structure early and delivering clear, maintainable solutions. Agile work with Git-based CI/CD pipelines and container-based delivery in cross-functional teams.

2015 TO 2021
GOTHENBURG

Fullstack Developer, Itiden AB

Web development in React and JavaScript, TypeScript, PHP and Laravel, WordPress and Drupal. Also built in C# and Unity. Worked on prototyping in LUA for medical devices and on Android Automotive for the Polestar 2, where I picked up Android Studio and RxJava during the project.

SELECTED ASSIGNMENTS AND PROJECTS

2026
INTERNAL PROJECT

AI-assisted development workflow

Led an internal project exploring how AI models can be used across the whole process from idea to finished code. I built a workflow with explicit limits on how the model is allowed to act, so that it can be trusted in real code: what it may touch, what is always reviewed by a person, and how the result is verified. That is the part I find interesting, making AI reliable enough for production rather than impressive in a demo.

2024 TO 2025
VOLVO
CONSTRUCTION
EQUIPMENT

VCE Fleet, ActiveCare and Reports

Built the ActiveCare and Reports modules in VCE Fleet, where a site manager could monitor the use and status of vehicles. Developed in Azure, GraphQL, React and NestJS with a microservice architecture on both front end and back end. Contributed as a senior developer by setting up the project structure, onboarding new team members and discussing technical solutions. Agile work with Git and Azure DevOps.

2022 TO 2023
STENA RECYCLING

Stena Recycling customer portal

Developed the customer portal for Stena Recycling's logged-in customers in a team spanning several disciplines. Stack: React, TypeScript, Node.js and AWS. Worked on data flows, REST APIs, databases and integrations with existing systems. Agile process with sprint planning, estimation and Git-based development.

ONGOING
OWN
INFRASTRUCTURE

Self-hosted Linux server

Builds and runs a physical Linux server (TrueNAS) hosting services in Docker containers. Responsible for users and permissions, cron, nginx as reverse proxy, HTTPS with Let's Encrypt and self-signed certificates, firewall, port configuration and VPN.

TECHNICAL SKILLS

FRONTEND	React, TypeScript, JavaScript, Next.js, Tailwind, HTML, CSS and SCSS, accessibility (WCAG)
BACKEND	Node.js, GraphQL, Prisma, REST APIs, integrations, SQL, NoSQL, authentication (JWT, OAuth 2.0, OIDC)
AI IN PRACTICE	AI-assisted development workflows, guardrails for model behaviour, Claude Code and Codex
CLOUD AND TOOLING	Azure (Functions, DevOps, CI/CD), AWS (Lambda, EventBridge, SQS and SNS), Docker, Git, GitHub Actions, agile practice, Jest and Vitest, Playwright
INFRASTRUCTURE	Linux, self-hosted servers (TrueNAS), nginx reverse proxy, TLS and certificates, networking with firewall and VPN
ALSO USED	C# (Unity), .NET (education), PHP and Laravel, WordPress, Drupal, Java and RxJava
LANGUAGES	Swedish (native), English (fluent)

EDUCATION

2011 TO 2013
JENSEN EDUCATION

Web development with .NET

Two-year post-secondary programme.
